Walking into this assignment I wasn't quite sure what to do. The demo during last week's class helped, but it didn't lead me anywhere. Looking up how to break python sandboxes brought me to isisblogs.poly.edu/2012/10/26/escaping-python-sandboxes/. Using this a reference point, I tried to access the code files of the various sandboxes assigned to me, unfortunately I wasn't able to get it to work.

The PDFs that share a name with the sandboxes, some prefixed with the github owner, describe those sandboxes.

fibonacci.py corresponds to CallMeSteve's sandbox.
